

Key features

At a glance

Adaptive gripper fingers for smooth and flexible gripping, using the Fin Ray Effect[®] modelled on a fish's tail fin.

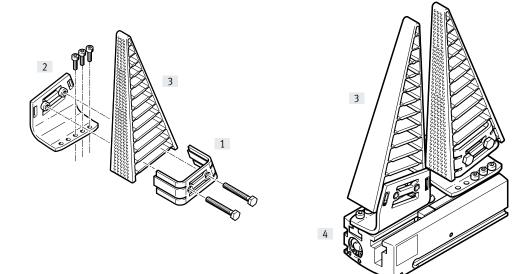

Two flexible bands, which meet at the top like a triangle, form the basis of the Fin Ray Structure[®]. The bands are connected by ribs, spaced at regular intervals, using flex hinges. This flexible but sturdy connection of the joints allows the gripper fingers to adapt to the contours of a workpiece.

Adaptation options with the mounting kit DHAS-ME / mounting bracket DHAS-MA

The gripper fingers' interface is designed so that both parts can be easily slid together to create a friction-fitting and form-fitting adapter while the fingers can flex.

The gripper finger can be mounted on an interface using the mounting kit DHAS-ME and a suitable adapter.

The gripper finger can be mounted on the parallel gripper HGPL-14 with the mounting kit DHAS-ME and the mounting bracket DHAS-MA.

- Areas of application:
- Machine building
- Agriculture
- Human-machine cooperation

- [1] Mounting kit DHAS-ME
- [2] Mounting bracket DHAS-MA
- [3] Adaptive gripper finger DHAS
- [4] Parallel gripper HGPL-14

- 📲 - Note

The following gripper types are particularly well-suited to using the adaptive gripper fingers:

- Long-stroke grippers
- Radial grippers
- Angle grippers
- The gripper finger is suitable for gripping rounded shapes
- The stroke per gripper jaw should be at least 10 mm

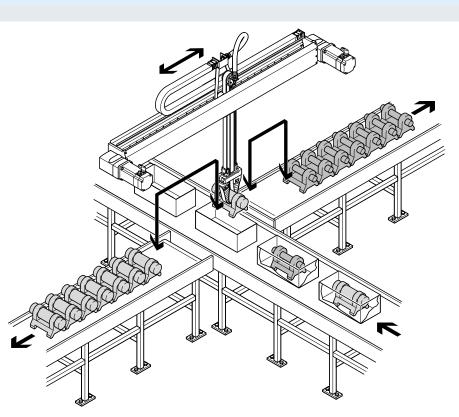

The gripper finger may become slightly deformed over the course of its service life. However, this does not have any influence on the gripper finger's functionality.

Key features

Application examples

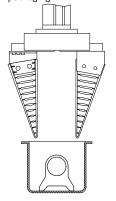

Transferring parts from tight packaging

- Different part diameters can be gripped in a form-fitting way with one gripper
- Using standard gripper jaws to grip parts that are tightly packed is difficult
- Thanks to the gripper fingers' pointed shape, they can be slid between the wall and the workpiece, even if the workpiece is off-centre

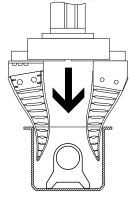

Step 1

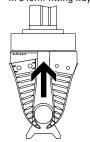

Position the gripper fingers above the packaging

Step 2

Slide the gripper fingers along the inside of the packaging

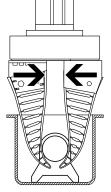

Step 3

Wrap the fingers around the workpiece in a form-fitting way

Lift the workpiece

Step 4

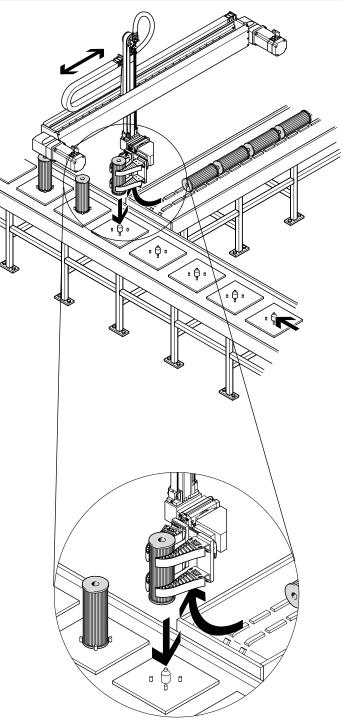

Key features

Application examples

Transferring sensitive parts such as filter cartridges

- Sensitive and fragile workpieces can be gripped gently
- Standard gripper jaws can damage workpieces during transfer
- Operating pressure can be adjusted using a proportional valve. This is particularly useful when the gripping force is distributed over several gripper fingers (less surface pressure)

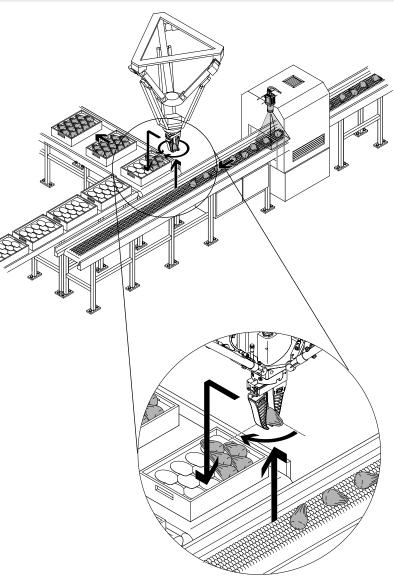

Key features

Application examples

Transferring unevenly shaped parts such as avocados

- Differently shaped parts can be gripped in an adaptive and gentle way without any need to change the gripper
- The option of having an internal block to reduce the stroke is particularly suitable if the workpiece forms vary significantly
- By varying the distance between the grippers, both the gripping force and the flex distance (the distance by which the fingers flex if pressed) can be adapted

- 🕴 - Note

These gripper fingers are not designed for the following or similar examples of use:

Aggressive media

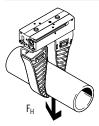

• Grinding dust

• Welding spatter

Datasheet

Max. retention force F_H as a function of gripping force F_G (of two gripper fingers) and workpiece diameter at 23 °C

The retention force $F_{\rm H}$ is the maximum force that may be applied so that the gripper fingers can still hold the workpiece.

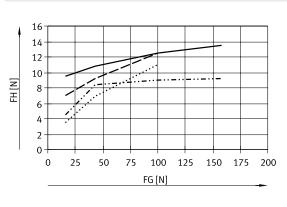

The values were determined under the following conditions:

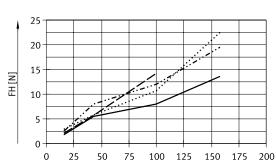

- With parallel gripper HGPL-14
- Cylindrical workpiece

Size 80

The values may differ under other ambient conditions (additional information on request).

Datasheet

Max. lateral force F_Q as a function of gripping force F_G (of two gripper fingers) and workpiece diameter at 23 °C

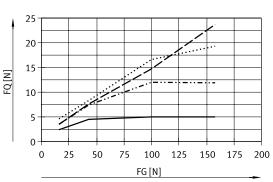

The lateral force $F_{\mbox{\scriptsize Q}}$ is the maximum force that may be applied so that the workpiece does not begin to slip.

The values were determined under the following conditions:

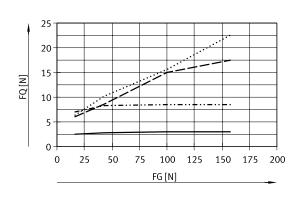

- With parallel gripper HGPL-14
- Cylindrical workpiece
- In the middle of the gripper finger (MP2 \rightarrow page 10)
